

REFERENCE DOCUMENT 02 — SCIENCE / GEOGRAPHY / COMPUTING

A separate reference document for testing document-level isolation, preprocessing, chunking, and retrieval. It contains independent facts and a structured table.

Geography

- 01. The Pacific Ocean is the largest ocean on Earth by surface area.
- 02. The Sahara is one of the largest hot deserts in the world.
- 03. The Amazon River carries a very large volume of freshwater toward the Atlantic Ocean.
- 04. Mount Everest is located in the Himalayas.
- 05. The Equator divides Earth into the Northern and Southern Hemispheres.

Computing & Information

- 06. A computer network allows devices to exchange data and share resources.
- 07. An operating system manages hardware resources and provides services for applications.
- 08. A database index can improve the speed of searches over stored data.
- 09. Encryption transforms information so that unauthorized parties cannot easily read it.
- 10. A backup is a separate copy of data that can be used for recovery.

Earth & Space

- 11. Earth rotates on its axis and completes approximately one rotation in a day.
- 12. The Moon orbits Earth and reflects sunlight.
- 13. The Solar System contains the Sun and objects that orbit it.
- 14. Seasons on Earth are strongly related to the tilt of Earth's rotational axis.

Structured Data

Item	Value	Unit	Note
Earth radius	6371	km	approx.
Water boiling point	100	°C	at standard pressure
CPU cores	8	count	example configuration
Data backup	3	copies	example policy
Moon orbital period	27.3	days	sidereal

Document Test Notes

- This document is intentionally different from doc1.pdf.
- It contains independent text and structured tabular data.

- It is intended to verify that preprocessing one document does not remove content from another document.
- The document should remain a separate source during later chunking, metadata generation, embedding, and vector-store ingestion.
