

India: Wildlife and Biodiversity

India-focused reference document prepared for multimodal RAG ingestion, chunking, embedding and retrieval testing.

Habitats

India contains Himalayan ecosystems, tropical forests, grasslands, deserts, wetlands, mangroves, islands and marine habitats. This geographic variety supports many species and makes conservation a major environmental activity.

RAG keywords: India; Habitats; Wildlife and Biodiversity

Animals

Important species include the Bengal tiger, Asiatic lion, Asian elephant, one-horned rhinoceros, snow leopard and red panda. Different animals require different habitats, food sources and movement corridors.

RAG keywords: India; Animals; Wildlife and Biodiversity

Protected Areas

National parks, wildlife sanctuaries, tiger reserves and conservation reserves protect habitats. Examples include Kaziranga, Gir, Kanha, Ranthambore, Jim Corbett and Periyar. Protected areas also support ecological research and monitoring.

RAG keywords: India; Protected Areas; Wildlife and Biodiversity

Conservation

Major challenges include habitat fragmentation, illegal wildlife trade, pollution, invasive species and human-wildlife conflict. Conservation combines protected areas, wildlife monitoring, habitat restoration, law enforcement and community participation.
